“A beautiful sliding glass wall system is a dream come true: you can spend time admiring the landscape and nature, enjoying the light and the view while protected in any season.”

Where Glass meets the Horizon

There are spaces that deserve to breathe. Where architecture meets the open air – and glass becomes the only thing standing between you and the world beyond. Our glass wall systems dissolve those boundaries entirely, drawing the outside in without compromise.

Precision-engineered and crafted to the highest standard, each system moves with effortless ease, offering shelter from the elements while never dimming the view. Season after season, the world remains yours to observe.

Glisse – The Glass Wall System

Glisse is defined by an unwavering attention to finish and a precise selection of materials. Combining strength with elegance, the system integrates effortlessly into both new-build and retrofit architectural projects.

Each installation consists of tempered glass panels – available in extra-clear or satin finish, transparent or smoked – set within a powder-coated aluminium structure with silver anodised rails. The result is a wall of glass that performs as beautifully as it looks.

Configuration Options

- Available in 2, 3, 4, and 5 rail configurations
- Up to a maximum of 10 panels per installation
- Lateral or central opening, tailored to the space
- Tempered glass: extra-clear, satin, transparent, or smoked options
- Powder-coated aluminium structure
- Silver anodised track rails

1 Dragging Handle

2 Lock

3 Track Rails and Gaskets

4 Lower Locking
